

# MDOrganizer

MDOrganizer: Easily organizes all your medical data. Integrates seamlessly into existing measurement equipment and HIS and optimizes your processes and procedures.

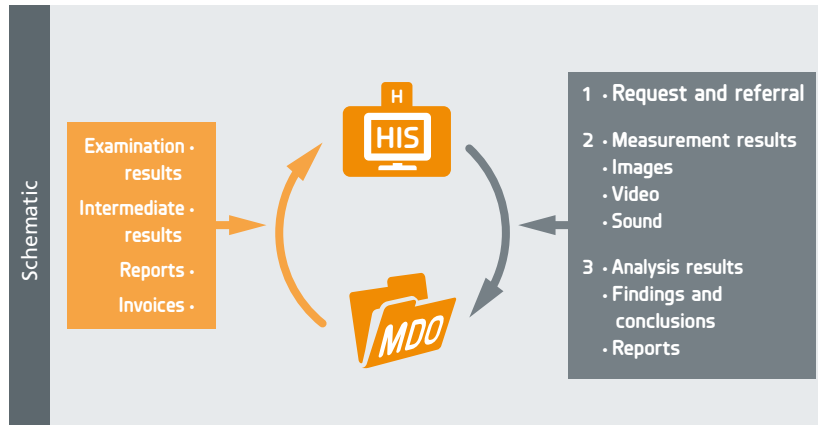

**CLINICAL  
SCIENCE SYSTEMS**

EYES ON MEDICAL DATA

# MDOrganizer

## Single point of entry

MDOrganizer benefits you as the single point of entry for your department. All patient and registration related data are easily organized into a single file, which creates a clear overview into your files and patients. MDOrganizer created records provide a complete history of all registration related data.

MDOrganizer allows you maximum flexibility for setup and work. Reports and forms can be adjusted to relevant data and work processes within your department. Within the flexibility of the work-processes, examinations and files are guaranteed to reach the right staff member hassle-free and in time.

## Seamless integration

MDOrganizer seamlessly integrates within your existing environment and equipment, which includes the Hospital Information System (HIS) and existing measurement devices, for example EEG, EMG, EP and ENG and different analysis programs. HIS connectivity includes numerous different incoming and outgoing message types, which guarantees easy availability of your department data within the hospital.

## Workflow and modules

Each registration passes different steps, presented in a clear and easy to follow workflow. Within these workflow different staff members are involved, like doctors, assistants and technicians and MDOrganizer presents them a clear and easy to understand workflow. Within this workflow it is immediately clear when action is required and bottlenecks can be easily identified and solved.

Within MDOrganizer the workflow is presented using separate and clear modules:

**Order Management:** advanced processing of the examination requests.

**Work List:** hassle-free worklists used when performing the examinations. Integration with the measurement equipment.

**Process:** clear workflow for post-processing the examinations.

**Patient Record Studio:** overview of examinations and patient's history.
